How to Subscribe to *PEWeldBank* Fusion Management System (FMS) on your PC or Laptop

! **You must subscribe to "PEWeldBank Fusion Logger" if you want to use sensors**

1. Go to *PEWeldBank*.com on your PC or Laptop

2. Click on Sign in

3. Click "Sign up for new account"

Info@PEWeldBank.com
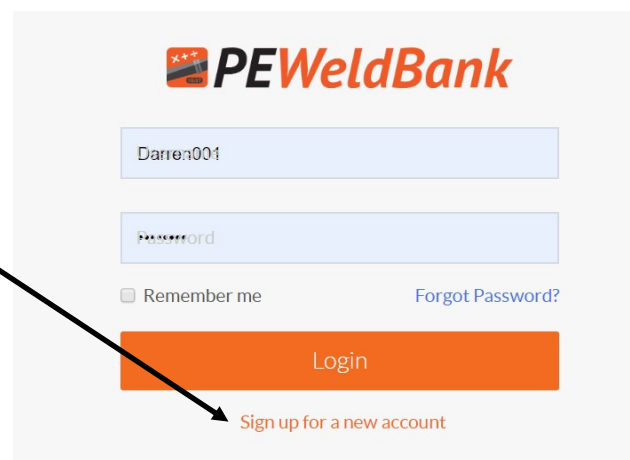

PEWeldBank.com

Subscription Rates

Go to PEWeldBank.com for the current subscription features, details and prices.

Note that there are 3 different Subscription levels

"Start up User" this is simply a calculator with timers, it also prompts the user through the process, but does not have any storage or active pressure and temperature reading.

"Individual User" This has the features as in "Startup User" but also allows the user to store and distribute weld records including more detail, this level does not have active pressure and temperature reading.

"Enterprise Multi User" This has the features as in "Startup User" and "Individual user" but allows for multi users to keep records on one company data base and most importantly connection to Data collection sensors.

PEWeldBank.com

## How to log on to the Fusion Management System (FMS)

! **You must subscribe to "PEWeldBank Fusion Logger" if you want to use sensors**

1. Go to *PEWeldBank*.com on your PC or Laptop

2. Click on "Sign in"

3. Login:
   - User ID
   - Password
   - Login

Info@PEWeldBank.com

How to set up Company Details

Step 1, Click on Settings

Enter your Company Details. You can also insert a company logo here that will be displayed on your reports

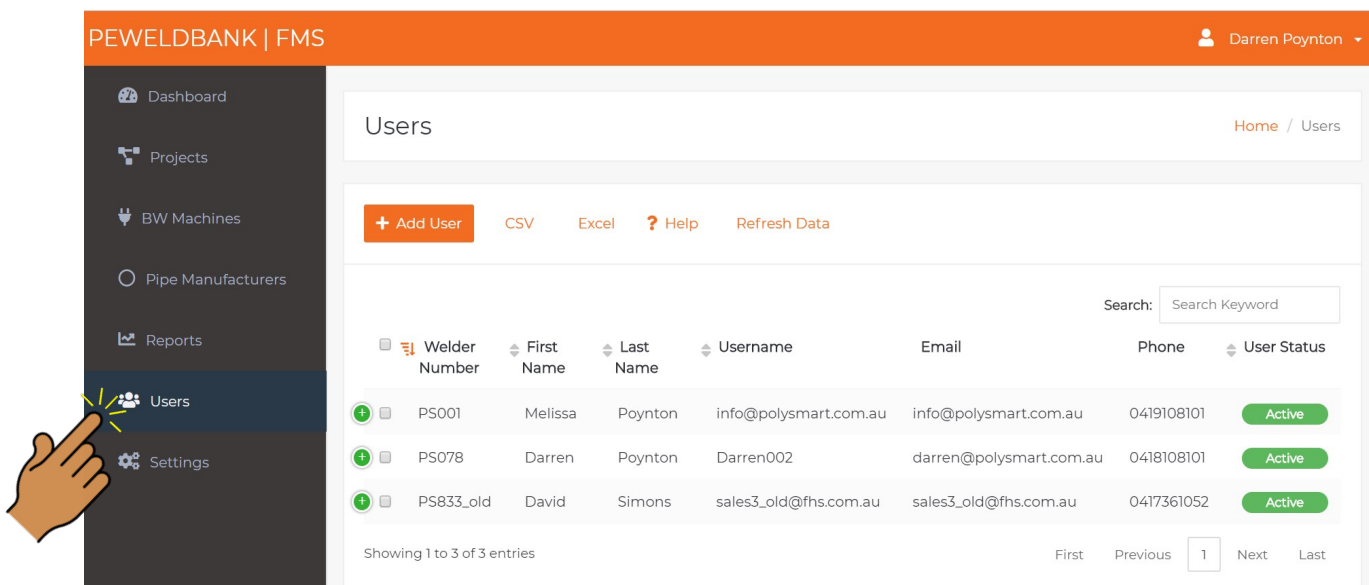

Info@PEWeldBank.com

Note there are 3 levels of users access;

- **<u>Super admin</u>** - This is the person that initially set the system up, they control company details, quantity of users, credit card etc. this user has access to all levels. To change Super admin user they must send an email to info@peweldbank.com and nominate the new Superadmin user from the user list, PEWeldBank will change this ASAP

- **<u>Admin</u>** - Controls adding / deleting, Projects, Users, Butt and Electrofusion machinery, pairing of sensors, pipe manufacturers

- **<u>Welder</u>** - Select projects, machines, pipe and welding standard, use of app to conduct welding

Set up Users (welder / admin)

Step 2, Click on Users

Set Up User Details. You can allocate a User "Welder" or "Admin" rights

Info@PEWeldBank.com

How to set up Butt Welding and Electrofusion Machines

Step 3, Click on BW Machines or EF Units

Set Up your Butt Welding Machines or Electrofusion Control Units

Set up Pipe & Fittings Manufacturers

Step 4, Click on Pipe Manufactures

Set Up your Pipe and Fittings Library

Info@PEWeldBank.com

PEWeldBank.com

Set up Projects / Jobs

Step 5, Click on Projects

Set Up Project Details

Quality / Process Checklist

Is weld area protected?	Yes
Have the pipes been cleaned before placing in machine?	Yes
Are pipe ends covered?	Yes
Is pipe faced correctly?	Yes
Have pipe faces been cleaned?	Yes
Have pipe ends been checked for gap?	Yes
Is pipe aligned within 10% of wall thickness?	Yes

Alignment Photo   **Finished Weld Photo**

Notes
Good test weld

Sketch Pad

OH&S Take 5

STOP (Ask Yourself)

Am I aware of crushing points? (hydraulic movement)	Yes
Am I aware of sharp objects? (facing blades)	Yes
Am I aware of burning? (heating plate)	Yes
Have I protected myself from energy sources? (electrical, hydraulic, temperature)	Yes

THINK

If a procedure or work instruction exists for the job am I familiar with it?	Yes
Am I trained, competent and authorised to do the job?	Yes
Do I have fit for purpose tools, equipment and PPE?	Yes
Can I control the risks associated with my task that effect the health and safety of myself or those around me and / or impact the environment?	Yes
If a permit is required for the job has a JSA or SWM etc. been completed?	Yes

IDENTIFY

Have I identified all the hazards and existing controls for the job?	Yes
Have I identified all the hazards and existing controls in the surrounding areas?	Yes

CONTROL

Am I satisfied existing controls are adequate?	Yes

PROCEED – PERFORM THE TASK SAFELY

Operator Identification Photo

Statement
I, Darren Poynton, agree that I completed this weld correctly and completed checklists honestly.

Fitting Hydraulic Transmitter / Transducer to Machine

Hydraulic Connection

Many machines have a test port already fitted.
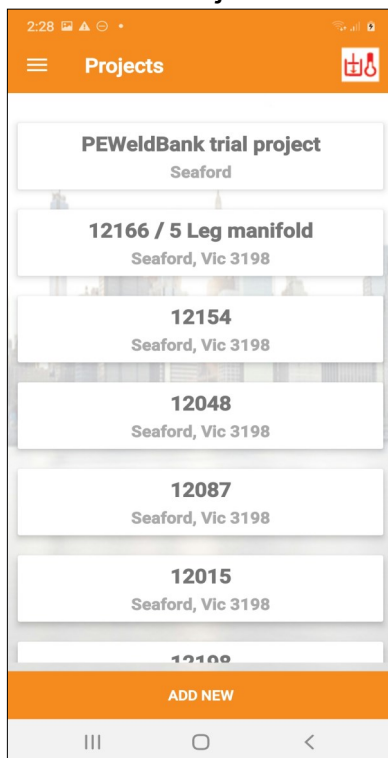

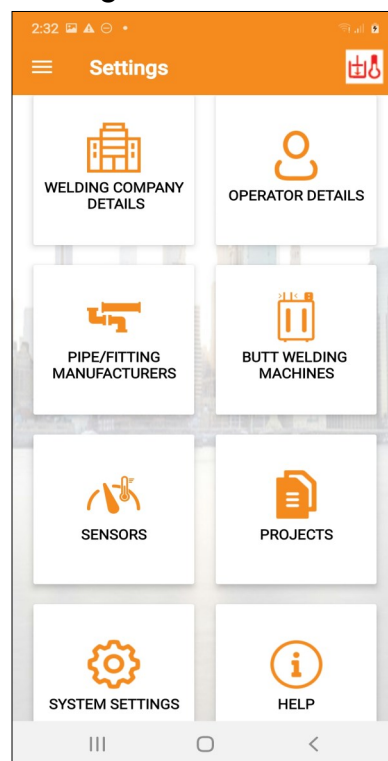

If your machine does not have a test point, you will need to fit a tee with test point to **the closing side of your pressure circuit**.

A tee with connection point can be fitted to a machine where the hoses are fitted to the pressure control unit. Any hydraulic company should be able to fit one for you.

See Appendix for examples.
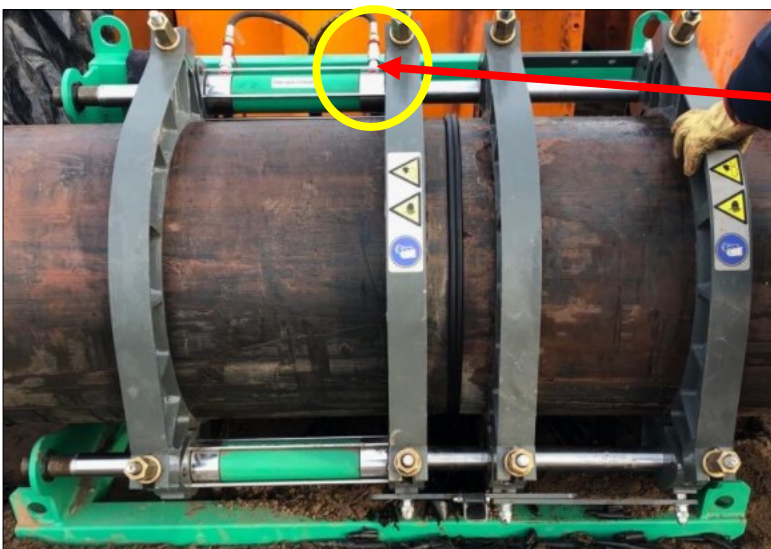

Note:

This is the closing side of the hydraulic cylinder, follow this hose back to your controller. As we set up more machines we will keep a library of connections, please don't hesitate contacting us for assistance with initial set up.

Pairing Sensors to Phone or Tablet

www.PEWeldBank.com

Info@PEWeldBank.com

# PEWeldBank.com

Bluetooth Setup & Pairing of Sensors

! *N.B. you can only use sensor set with **PEWeldBank Fusion Logger** subscription, For initial pairing you must also have administrator user level permission and connection to the internet*

Ensure that Bluetooth is enabled on your smartphone / tablet. Follow the prompts

1. Click **Dropdown Menu**
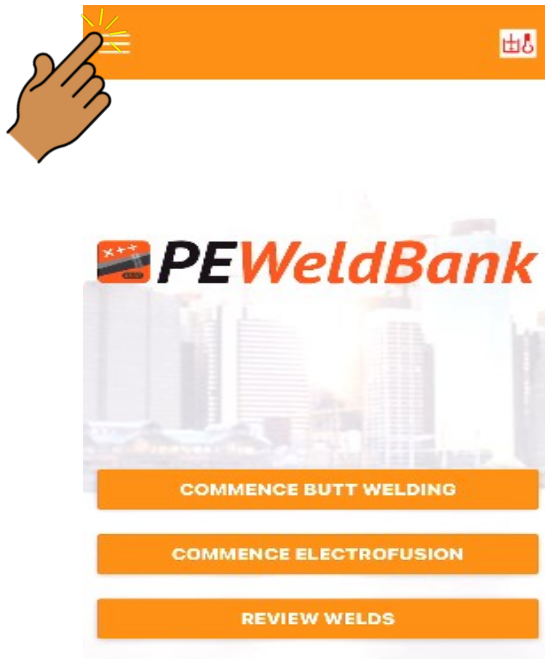

2. Click **Settings**

3. Click **Sensors**

4. Click **Add New**

# Bluetooth Setup & Pairing of Sensors Continued

Pairing of Sensors

- Connect Pressure sensor to pressure at least 2 bar.
- For the Temperature sensor holding the Surface Temperature Probe against heater plate (at least 80°c / 176°f) will activate the sensor.
- The status light will flash, enabling you to proceed with Bluetooth pairing.

Alternatively

- Remove and replace the battery from the sensor, this will activate and status light will flash for 2 minutes enabling you to proceed with Bluetooth pairing.
- Status light must be flashing fast before proceeding.

Follow instructions in Dropdown menu on smartphone or tablet [settings] [sensors] [add new] [save]
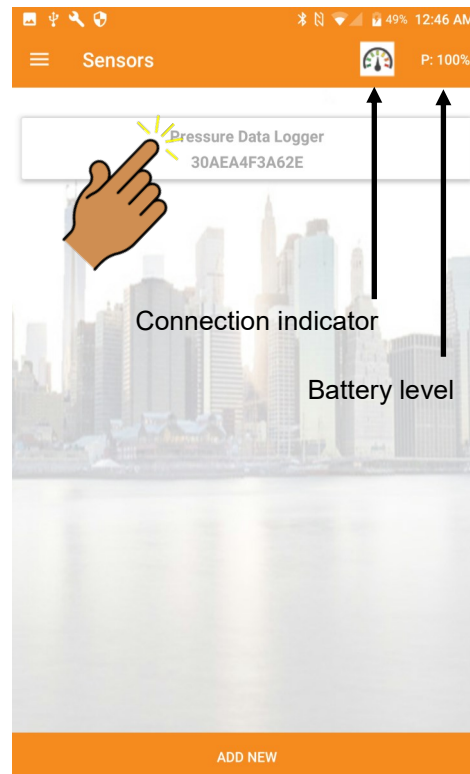

Scan QR code:

Welding Procedure for App

Also see Basic Welding Machine Operating Procedure

www.PEWeldBank.com
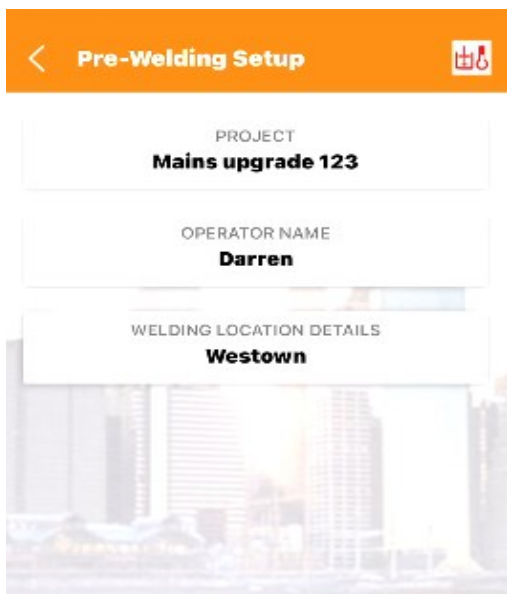

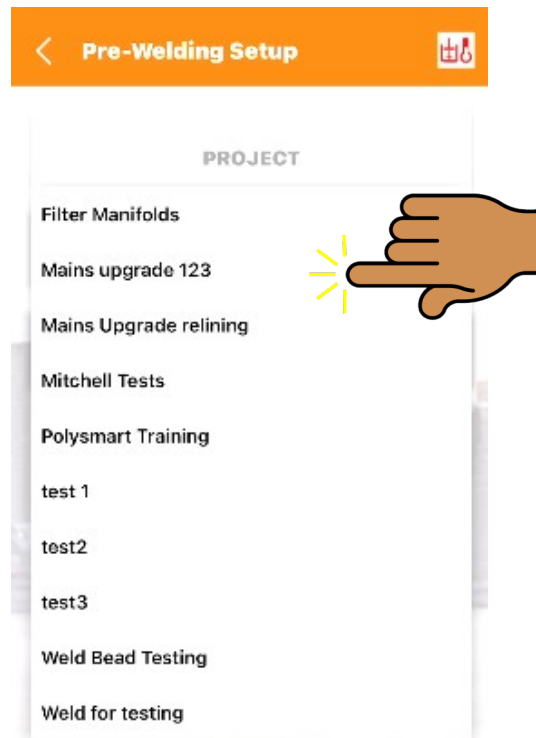

Info@PEWeldBank.com

Home Screen: Commence Butt welding or Electrofusion

From this screen you can commence Butt welding or Electrofusion.

You can also review previous welds or allocate a second GPS location

PEWeldBank.com
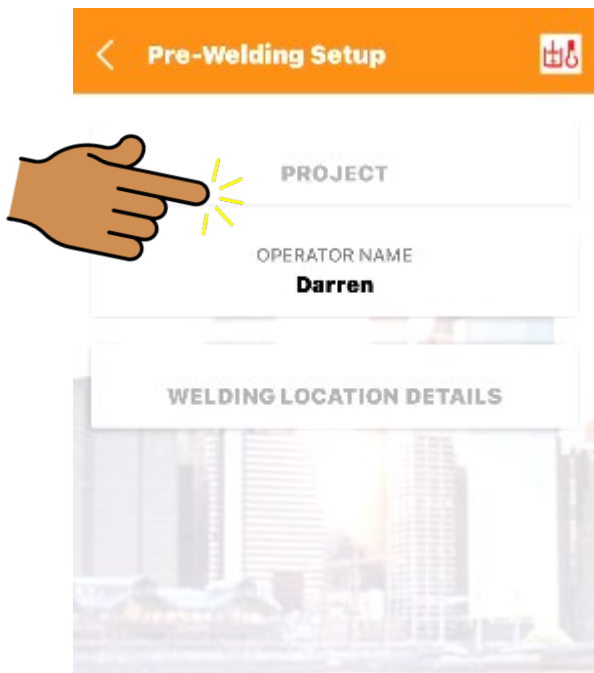

Select Project

From this screen you need to select a project.

The Projects can be set up from within this app or from the FMS.

Note: You must have Admin access to set up projects, however User or Admin may select a project to use.

Info@PEWeldBank.com

Safety "Take Five"

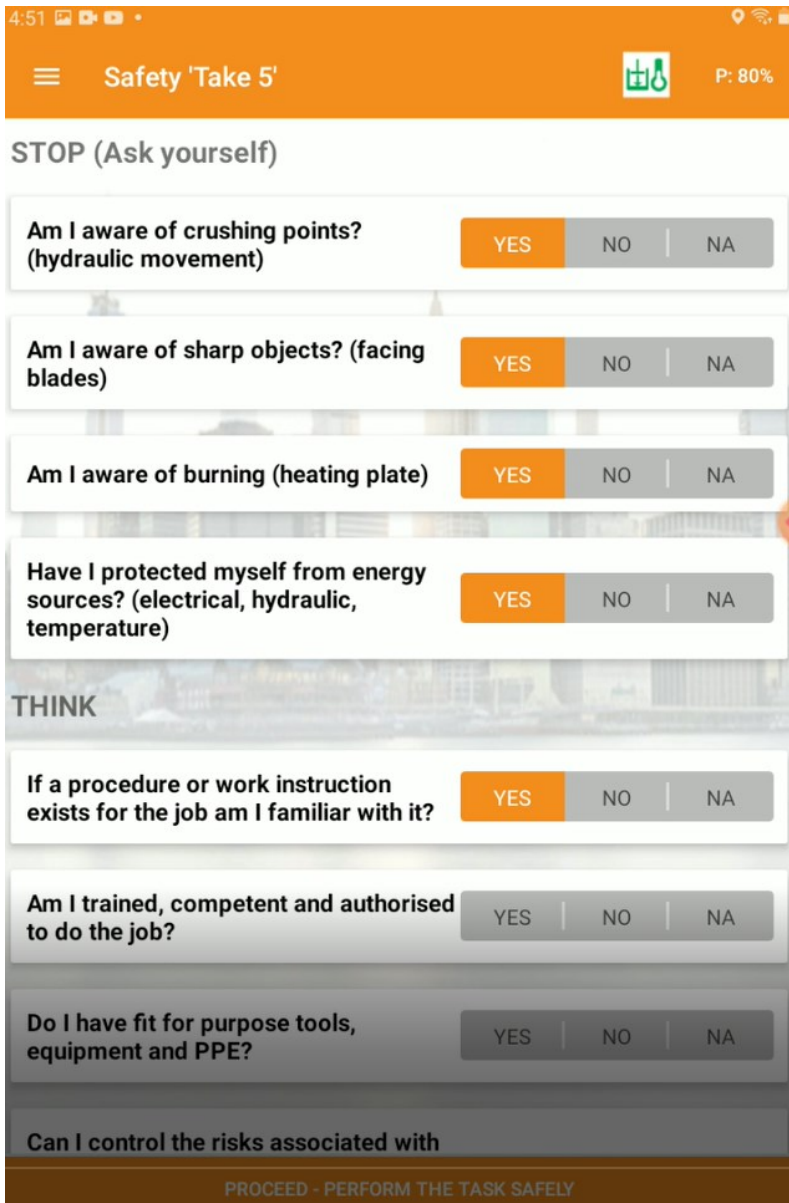

This is a 12 question OH&S assessment, these questions are asked of the user at the start of the welding session.

This information is collected and recorded within reports, available within FMS

By default this option is disabled, this option may be enabled within System Settings

Info@PEWeldBank.com

Machine selection

From this screen you will need to select a Machine.

Machines can be added and edited from within this app or from the FMS.

Note: You must have Admin access to set up projects, however User or Admin may select a machine to use.
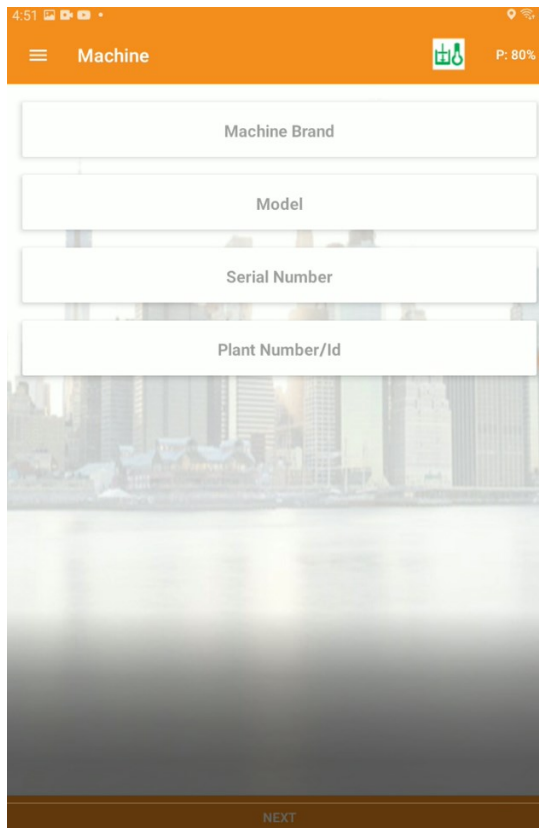

By selecting machine it will use stored hydraulic ram information for pressure calculations, and machine data in reports.

PE WeldBank.com

Pipe / Fitting selection

From this screen you will need to select a Pipe size and SDR, pipe wall thickness is automatically calculated but can be adjusted manually.
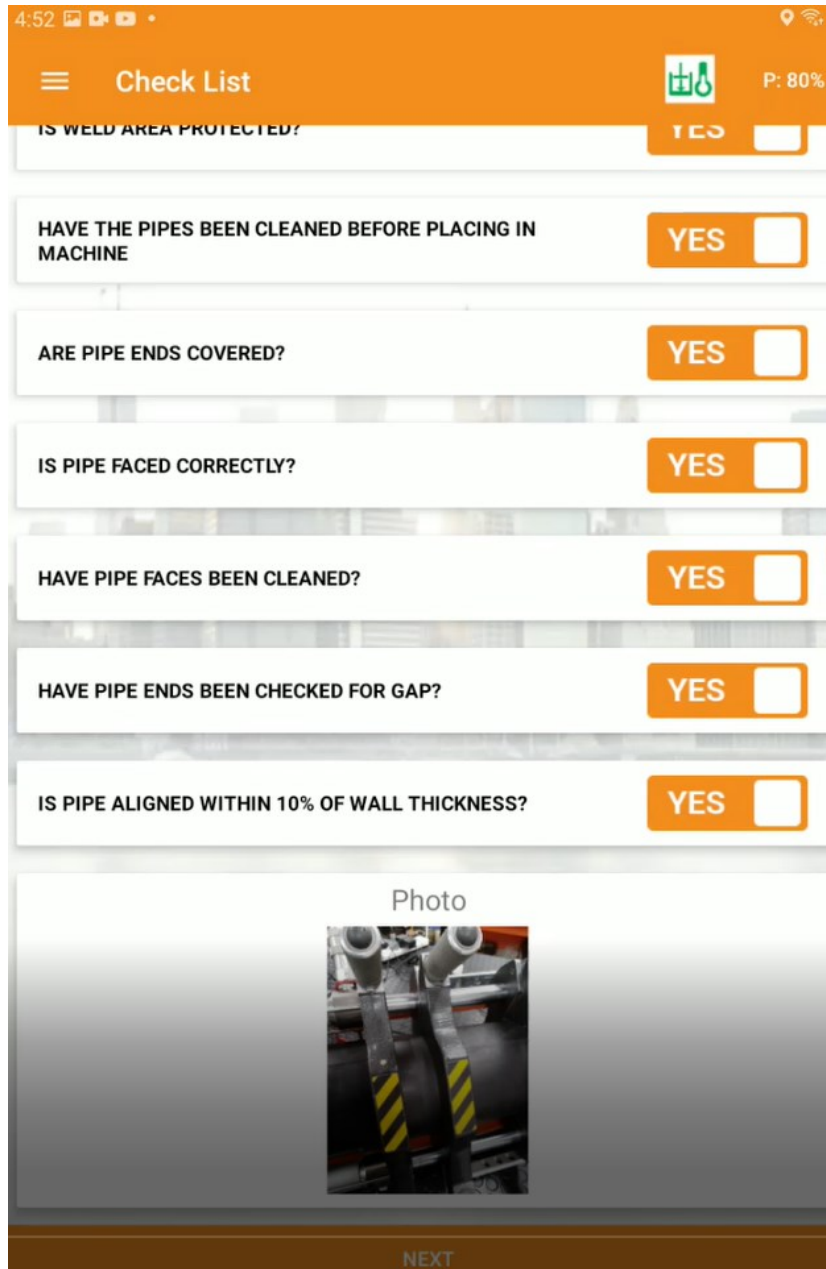

Manufacturer, Type and Profile fields are optional.

Pipe data can be added and edited from within this app or from the FMS.

Note: You must have Admin access to set up projects, however User or Admin may select a machine to use.

By selecting machine it will use stored hydraulic ram information for pressure calculations, and machine data in reports.

Info@PEWeldBank.com

Pre weld check list

This check list has 7 questions optional questions, these questions default to NO and are included on reports, however you do not need to answer these to be able to move onto the next screen.

Upon selecting yes to the last question the camera will be activated to allow user ot take a photo of pipe alignment and gap.

Info@PEWeldBank.com

Parameters

The Parameters screen displays a review of pipe and machinery and asks user to enter preferred welding standard, this preference is set as a default until the start of a new session.

The drag also needs to be entered in this screen.

Note: The Pressure Gauge will be active only when sensor set is supplied and paired.

Info@PEWeldBank.com

Check Heater plate
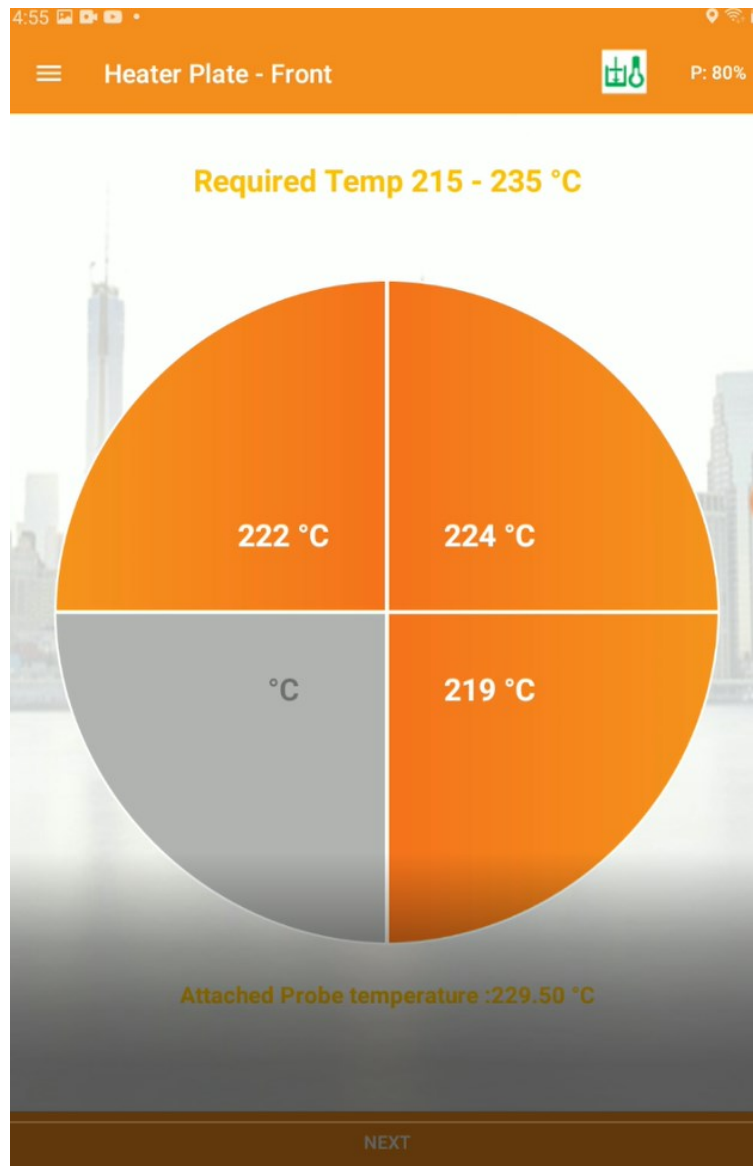

When connected to temperature sensor set, this screen automatically logs temperature during Bead up and heat soak phases, also using the supplied surface temperature probe the user can accurately record the surface temperature at the start of the welding session or at the start of every weld or turn to manual entry,

This temperature recording options can be adjusted within system settings

Info@PEWeldBank.com

Calculation and Pressure Pre set
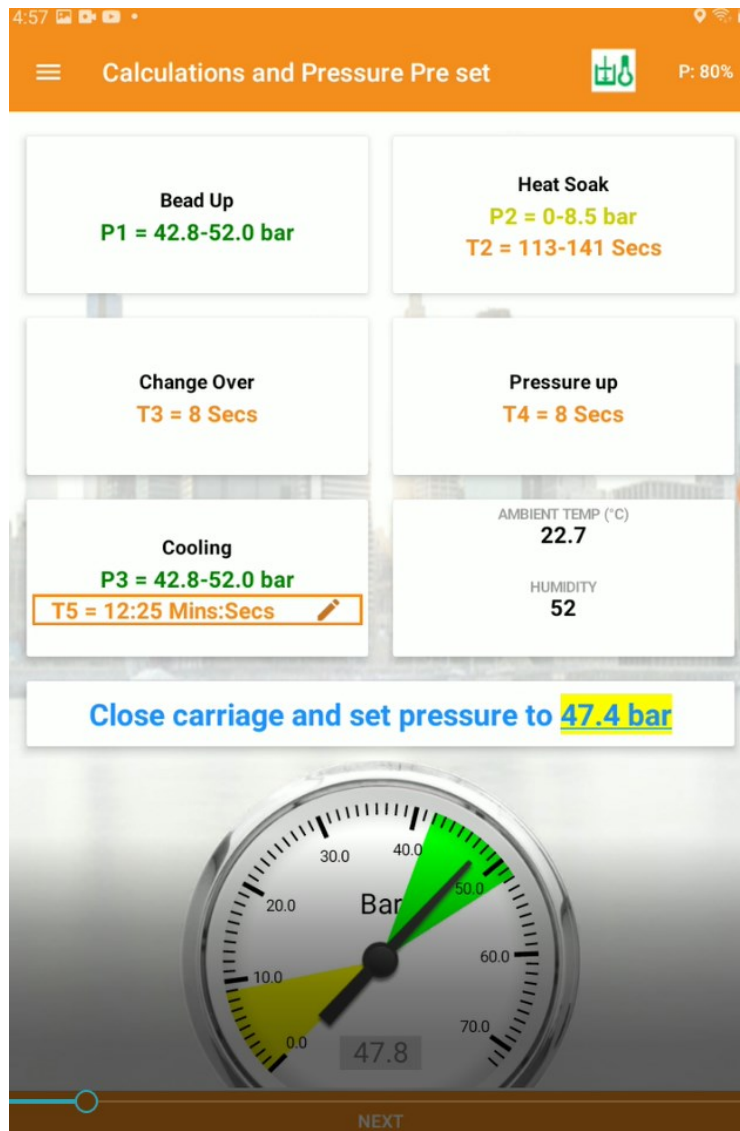

When connected to pressure sensor set, this screen automatically logs Ambient temperature and Humidity, if not connected to sensor set these can be added manually.

This screen also allows the user to manually adjust T5 cooling time to allow for Reduced cooling times or extending the time when allowance for rough handling is required. This adjustment is noted on weld reports!

Most importantly the user must set pressure for Phase 1 and Phase 5 at this point.

Info@PEWeldBank.com
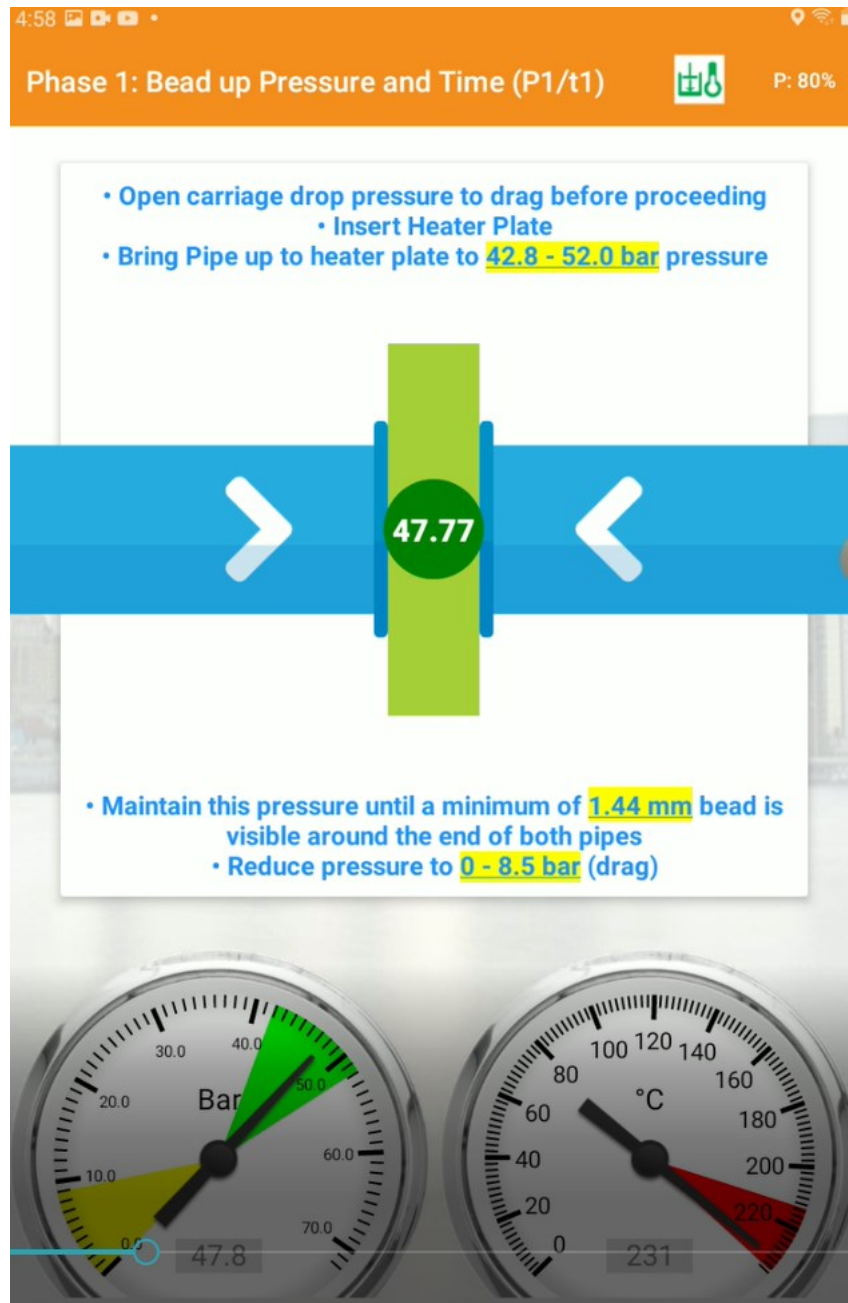

Phase 1: Bead up

Phase 1 screen Instructs the user what to do and when to reduce pressure to Drag.

Temperature can also be monitored during this Phase

Info@PEWeldBank.com

![PEWeldBank.com logo]
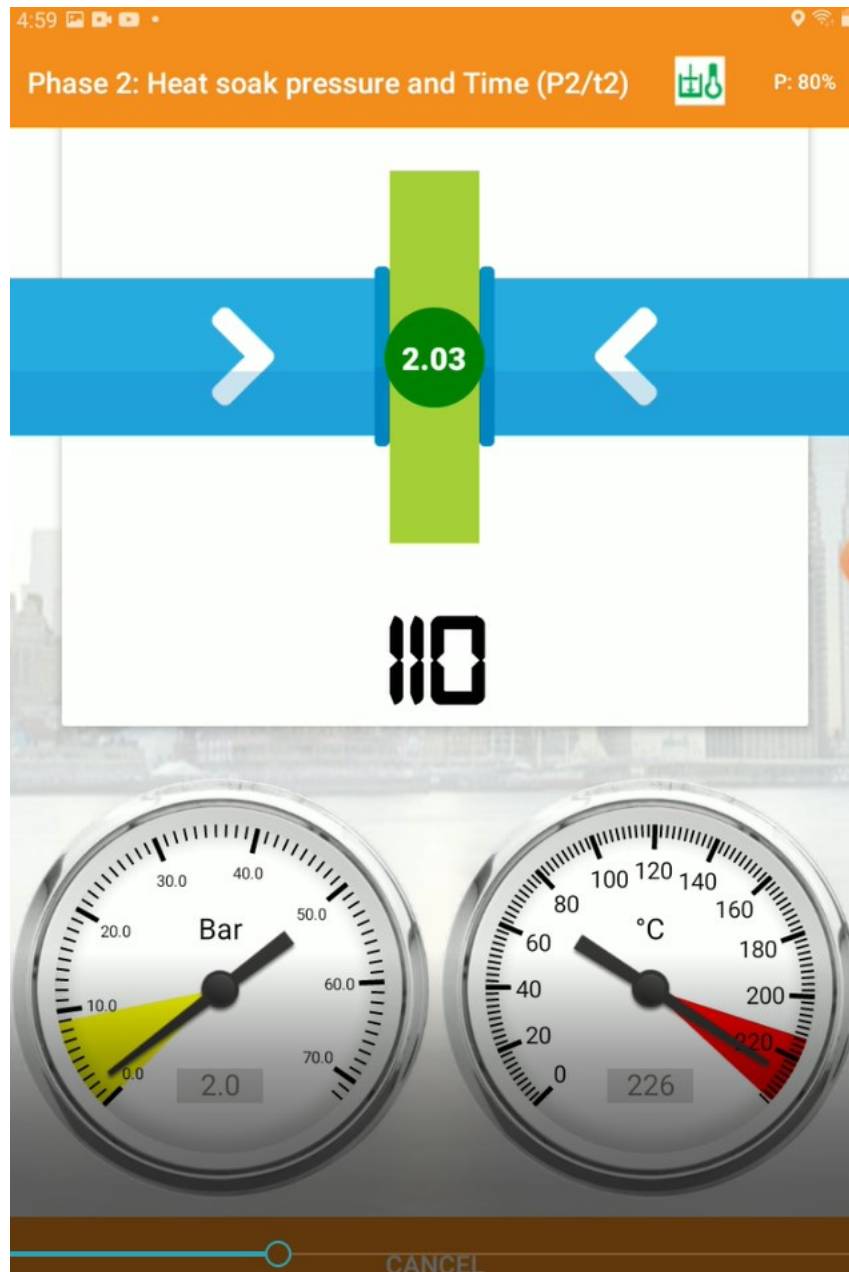

Phase 2: Heat Soak

After bead up as soon as user drops to Drag pressure or below the Heat soak timer begins count down (the pressure is recorded during this phase)

Phase: 3. Heater Plate Removal
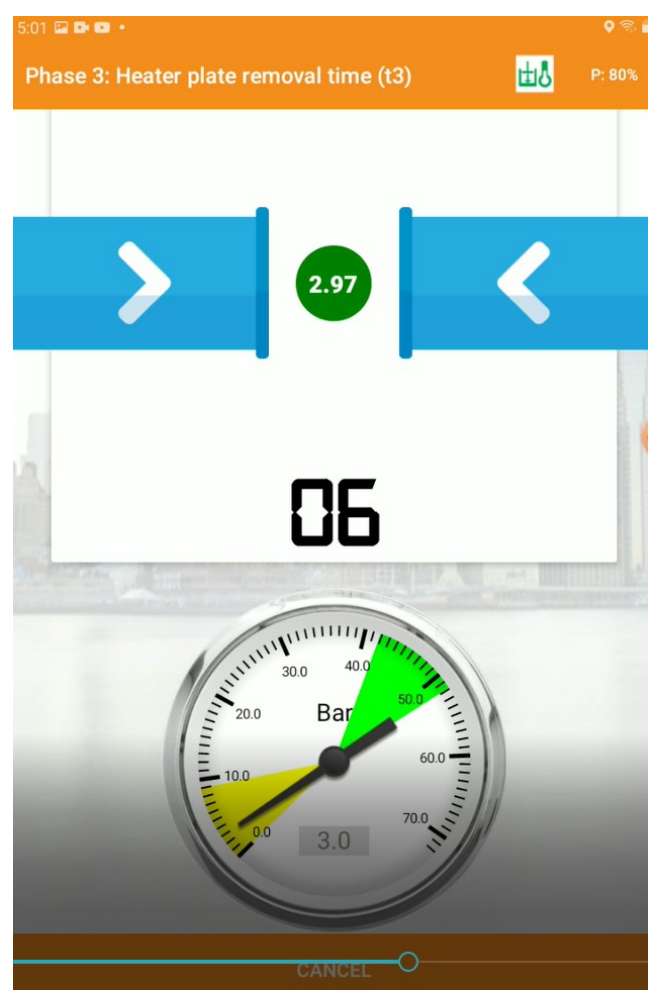

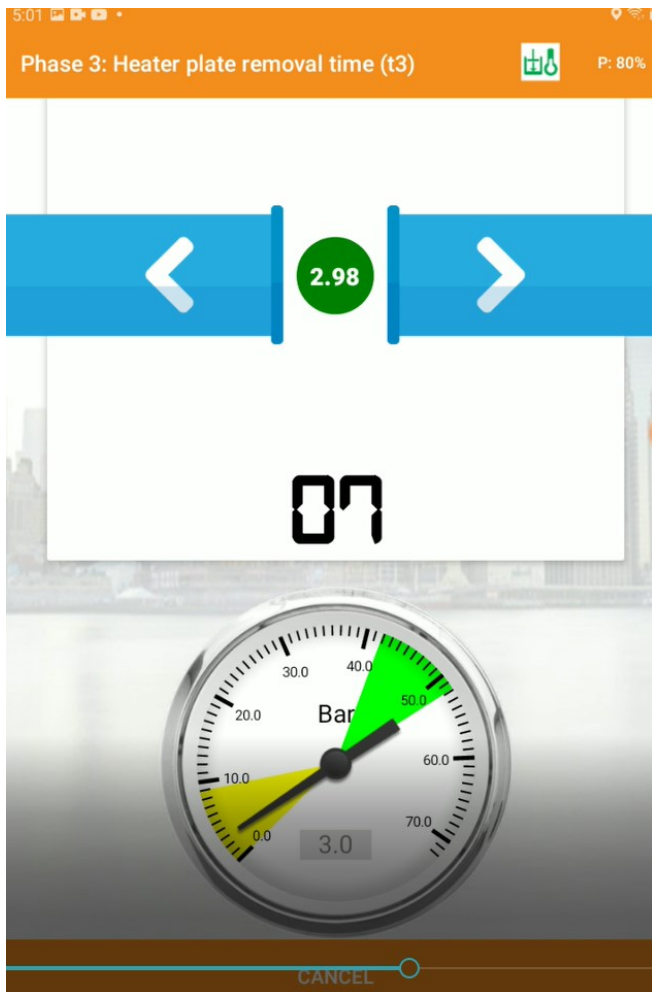

User is notified by a alarm to remove heater plate and bring ends back together within displayed time

Phase 4: Pressure up

(for high Pressure welding this Phase is incorporated within Phase 3)
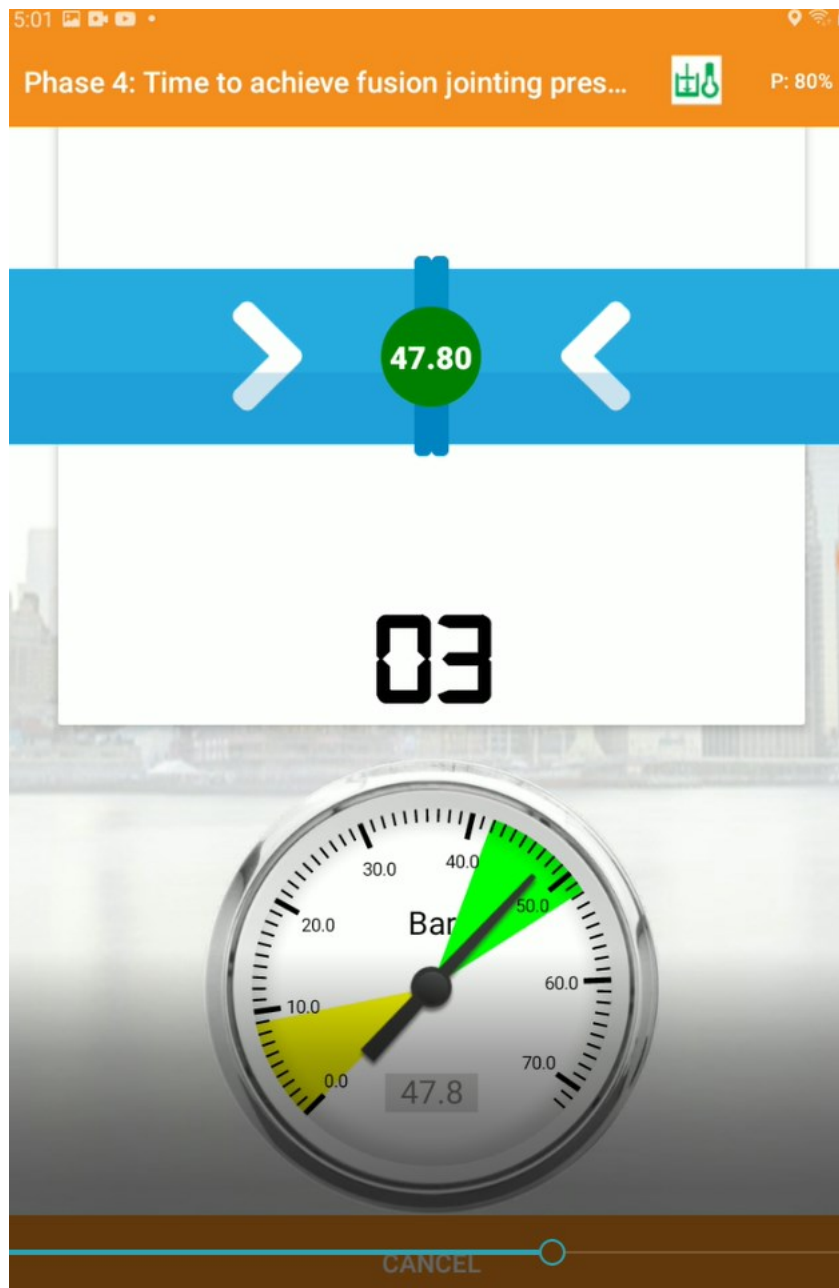

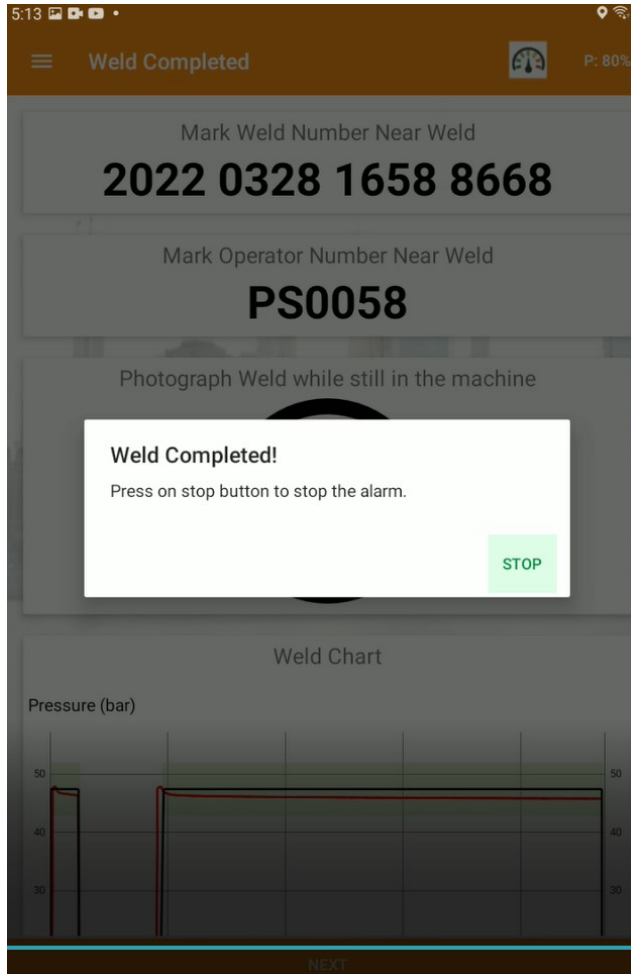

User is notified by a alarm to bring ends back up to weld pressure within displayed time.

Info@PEWeldBank.com

Phase 5 Cooling time in Machine under Pressure
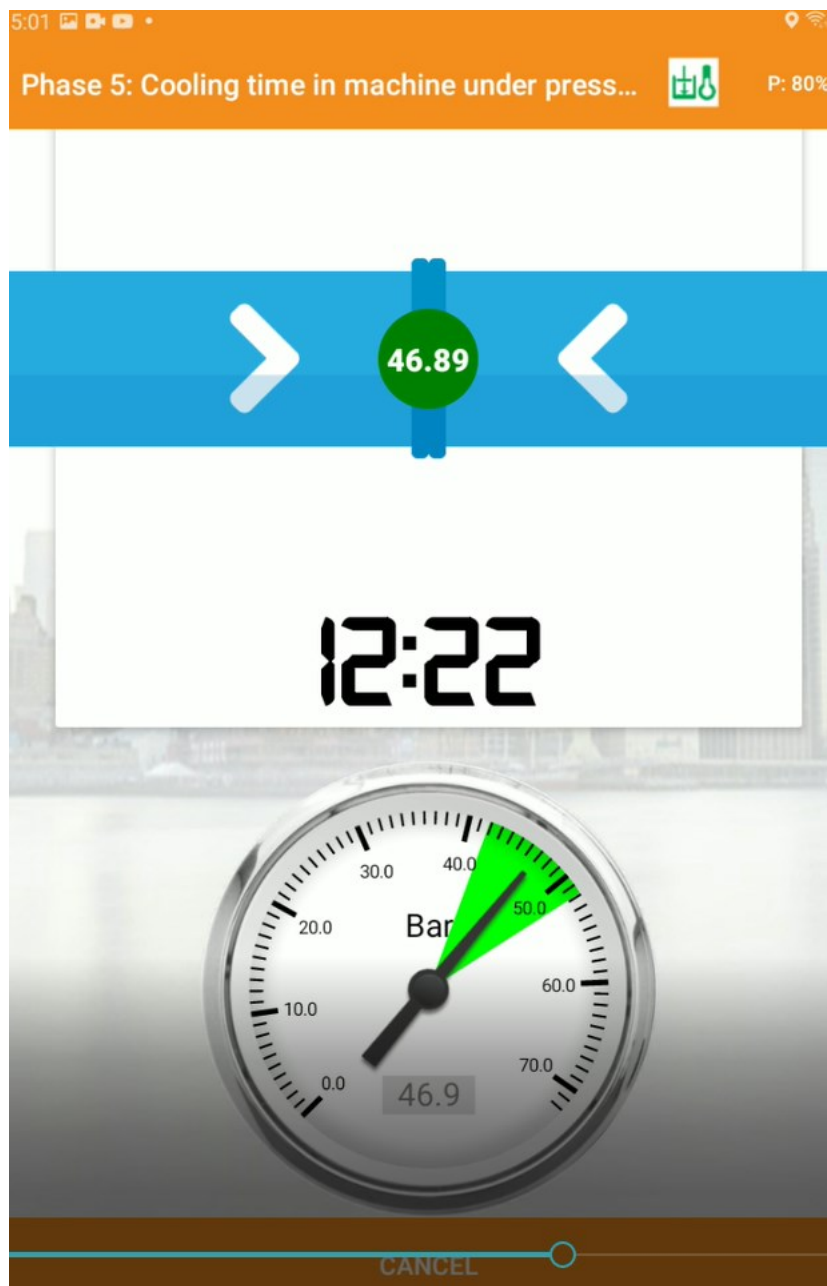

Timer automatically starts for cooling time

Info@PEWeldBank.com

Weld Completed

Once weld is completed the user is prompted to mark the unique weld number and welder id onto the pipe next to the weld
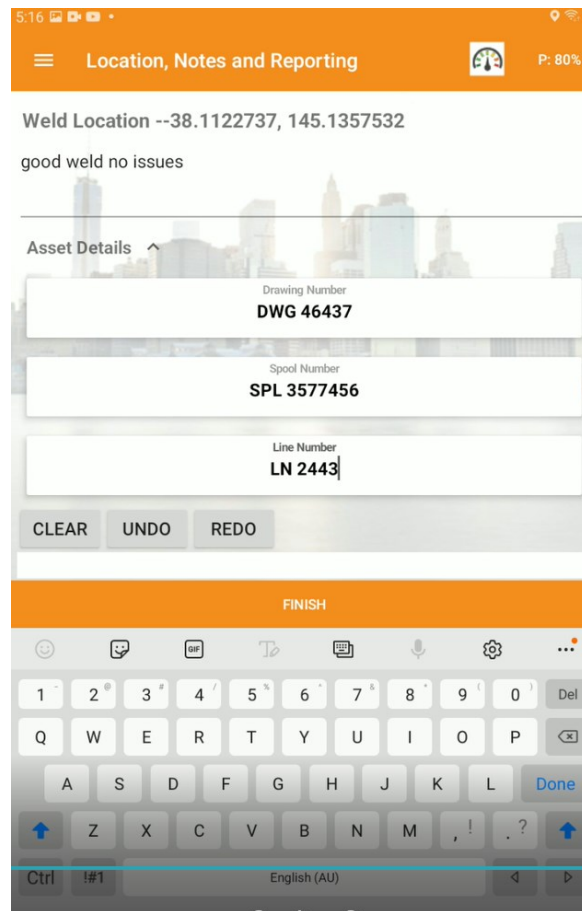

The unique number is made up from the following information.

Year					Month	Day			Hour	Minute		Part of user ID	FMS created from project		
2	0	2	2		0	3	2	8	1	3	3	7	8	6	6	8	-

The user is prompted to take a photo including the unique ID number of completed weld while still in machine.

The graph gives the user the opportunity to review the weld before progressing.

Info@PEWeldBank.com

Location, Notes and Reporting

The GPS is automatically recorded and displayed in this screen

The User can also enter comments

And further Asset details including :

Drawing Number

Spool Number

Line number

There is an area here to include a ;

Sketch

Operator Identification Photo

And signature

The information here is not compulsory except for the signature.

Info@PEWeldBank.com

Do you wish to start another weld
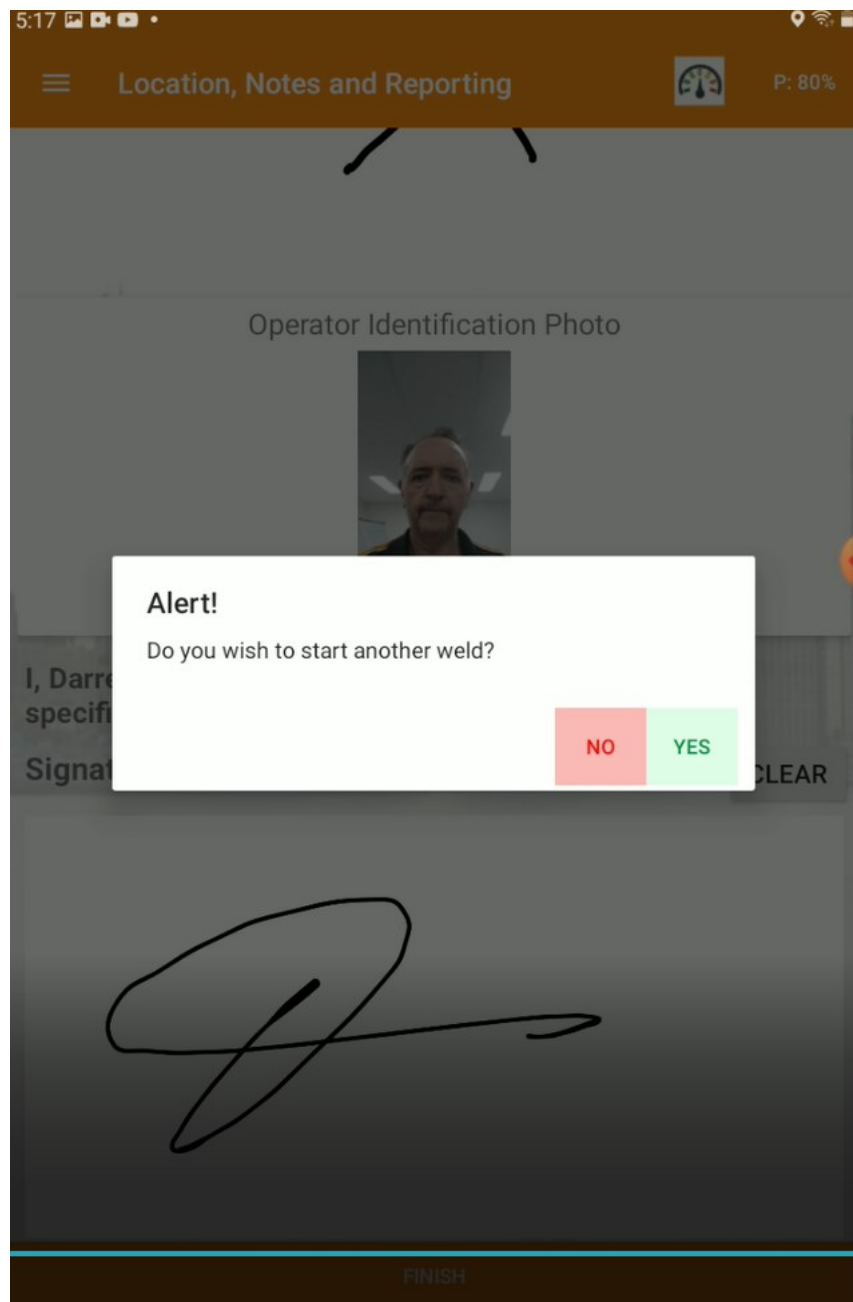

At this point the user can choose to finish the session or continue to another weld, if they choose to continue they are taken back to the check list screen and all other data parameters are still set to the same as previous weld.

If the user choses No the system returns to the Home screen

Info@PEWeldBank.com

Basic Welding Machine Operating Procedure

www.PEWeldBank.com

Info@PEWeldBank.com

Hydraulic Valve Control Sequence when using PEWeldBank (On demand flow)
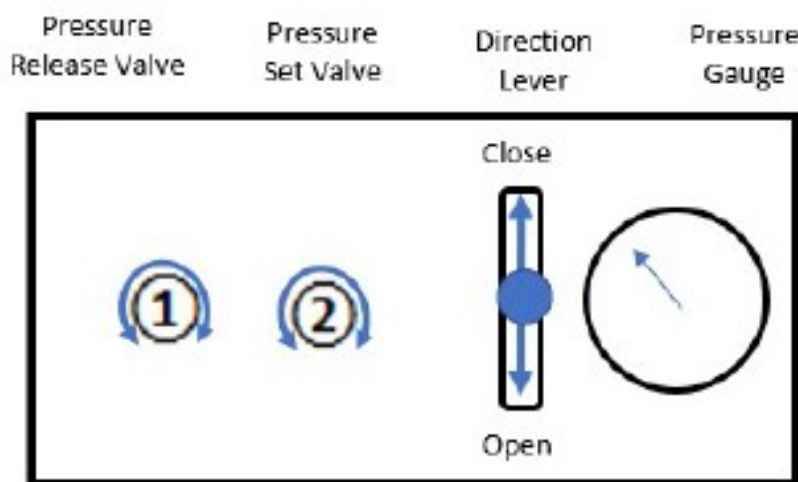

Generic Pressure control unit. Most basic units run similarly but valves may be arranged differently.

After Facing, cleaning, alignment and Recording Drag pressure

1. Close Pressure Release Valve ①
2. Close carriage and set Pressure Set Valve ② to XX bar
3. Press [NEXT] on PEWeldBank.
4. Open carriage this will drop pressure to drag or less.
5. Insert Heater Plate.
6. Bring Pipe up to heater plate to XX bar pressure and hold Direction Lever for several seconds.
7. When you have bead up size
8. Reduce to 0-Drag Using Pressure Release Valve ①
    And Wait for Heat Soak Time.
8. Open Carriage: Just enough to remove heater plate.
9. Remove Heater Plate and Close carriage, hold Direction Lever for several seconds.

(Continual flow:- Hydraulic pump runs continually,
On demand flow :- Hydraulic pump only runs when lever activated)

Info@PEWeldBank.com

Valve Control Sequence when using PEWeldBank (Continual flow)
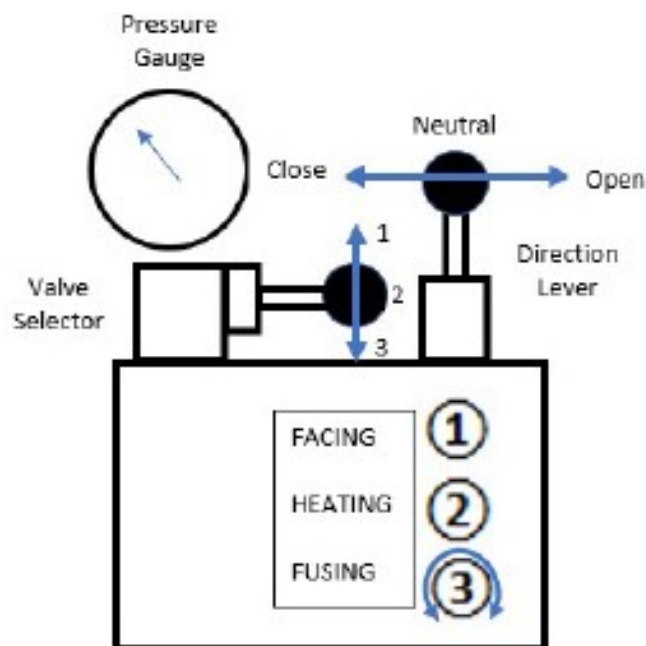

After Facing, cleaning, alignment and setting Heating / Drag pressure.

1. Close carriage and set Fusing pressure valve ③ to XX bar
2. Press [NEXT] on PEWeldBank
3. Open carriage ALL THE WAY this will drop pressure to drag or less.
4. Insert Heater Plate
5. Bring Pipe up to heater plate to XX bar pressure
6. When you have bead up size
7. Reduce to 0-Drag

To do this correctly you must move "Valve Selector" to 2 position and wait for pressure to drop to below drag, then move "Direction Lever" to neutral. And Wait for Heat Soak Time

8. Open Carriage:, move "Valve Selector" down to Fusion Position 3, move "Direction Lever" to the right, just enough to remove heater plate.
9. Remove Heater Plate and Close carriage.
10. To avoid pressure spike, slow carriage speed just before closure.

(Continual flow:- Hydraulic pump runs continually,
On demand flow :- Hydraulic pump only runs when lever activated)

Review welds
and add second
GPS location

www.PEWeldBank.com

Info@PEWeldBank.com

How to Review Welds on Smartphone or Tablet

Go to the **HOME SCREEN**

Click on **REVIEW WELDS**
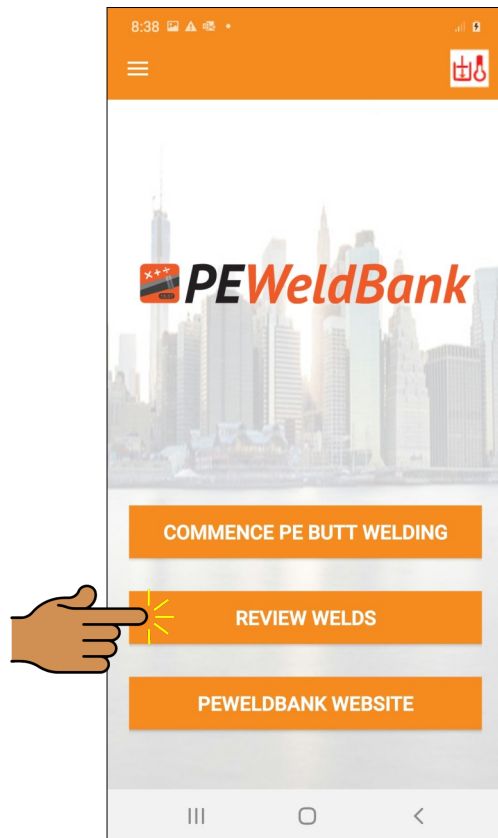

Empty green circle indicates that weld has been recorded on Tablet / Phone, but is waiting to be uploaded to FMS

Full green circle indicates that the weld is recorded on Tablet / Phone *and* FMS

If you see a cloud icon this means this weld is only on the FMS but can be downloaded to the Tablet / Phone by clicking on icon

Info@PEWeldBank.com
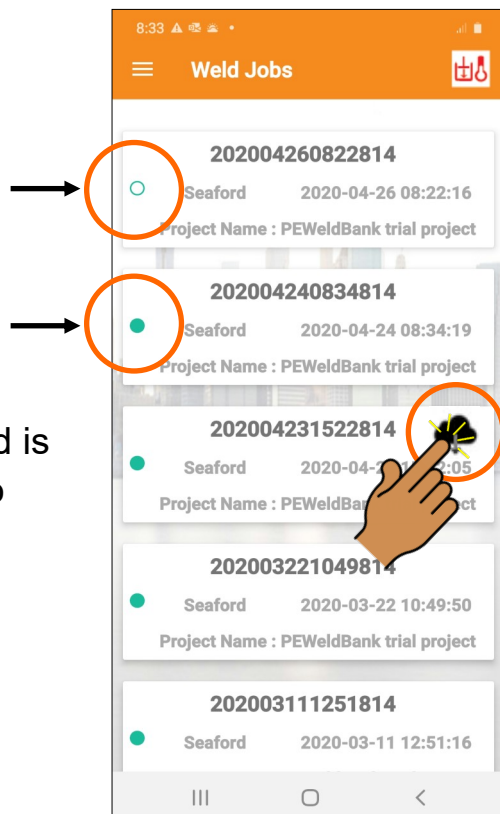

How to Review Welds - Insert 2nd GPS Location

A valuable feature of **PEWeldBank** is the ability to add a 2nd GPS location. This is particularly useful where the installation location is different to where the welding was undertaken.

From the Review Welds screen (see previous page), select a weld you want to review or add the second GPS location.
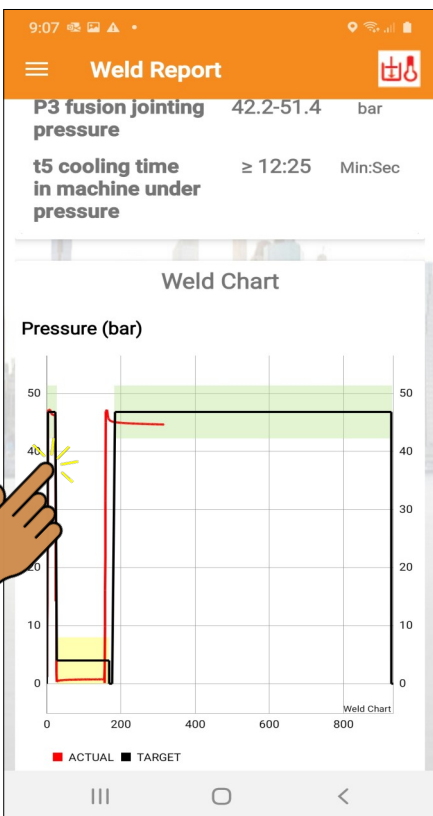

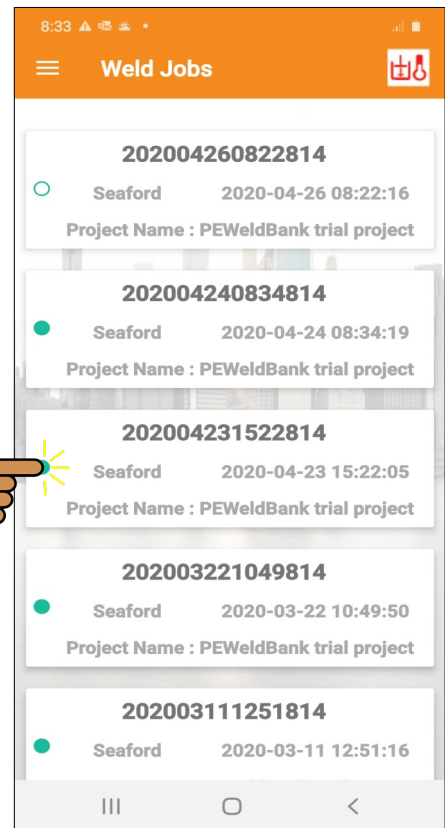

The on-screen Report shows all information about this weld

Zoom into graph to see finer detail
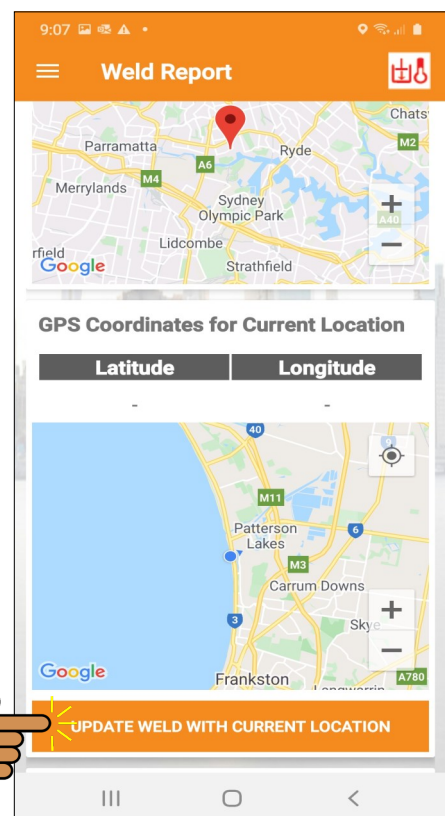

Scroll down further to find the GPS location.

Click here to update weld location, this does not change original information it simply adds a second GPS location for this weld which will be available on reports.

Info@PEWeldBank.com

Trouble shooting

www.PEWeldBank.com

Info@PEWeldBank.com

Troubleshooting

Pressure Sensor		
Problem	**Reason**	**Solution**
No fast flashing blue status light on sensor	Sensor connected to wrong side of hydraulics	Make sure it is connected to closing side of hydraulics (this is generally the cylinder inlet closest to middle of machine see photo)
	Sensor not connected to hydraulic with pressure	Connect orange cable to transducer and sensor and increase pressure, fast flashing should start within 10 seconds
	Orange cable connected to wrong port on sensor	Connect orange cable to Port "1" on sensor
	Battery low or flat on sensor	Charge sensor until Charging light shines green
		Check operation of sensor by momentarily removing and replacing battery, Blue Status light should flash fast
Zero pressure reading on smartphone		Check above information
I have fast flashing blue light but wont connect to smartphone	Bluetooth turned off in smartphone	Turn Bluetooth to on in smartphone
		Smartphone must be connected to internet for initial pairing
	Camera disabled	Allow camera settings in smartphone
		Try connecting to nearest sensor rather than scanning qr code
	Not paired	Check in PEWeldBank on smartphone settings > sensors, your sensor should be listed here (check that the number matches number on sensor) delete any sensor not currently required
	Battery low or flat on sensor	Charge sensor until Charging light shines green
	Battery low or flat on smartphone	Charge smartphone
	Sensor not connected to pressure	Check above information
Zero pressure reading on smartphone		Check above information
Pressure reading on Machine Gauge is different to smartphone	Machine Gauge is probably incorrect	All PEWeldBank transducers are highly accurate and calibrated when packed, if concerned have your gauge tested.

Info@PEWeldBank.com

Troubleshooting

Temperature Sensor		
Problem	**Reason**	**Solution**
No fast flashing blue status light on sensor	Surface Probe not in contact with Hot heater plate	Hold Surface Probe against Hot heater plate for at least 10 seconds this will activate sensor
	Battery low or flat on sensor	Charge sensor until Charging light shines green
	Surface Probe not connected to correct port on sensor	Connect Surface probe to "Fixed" port on sensor
		Check operation of sensor by temporally removing and replacing battery, Blue Status light should flash fast
I have fast flashing blue light but wont connect to smartphone	Bluetooth turned off in smartphone	Turn Bluetooth to on in smartphone
		Smartphone must be connected to internet for initial pairing
	Camera disabled	Allow camera settings in smartphone
		Try connecting to nearest sensor rather than scanning qr code
	Not paired	Check in PEWeldBank on smartphone settings > sensors, your sensor should be listed here (check that the number matches number on sensor) delete any sensor not currently required
	Battery low or flat on sensor	Charge sensor until Charging light shines green
	Battery low or flat on smartphone	Charge smartphone
	Surface probe must be held against heater plate	Hold Surface Probe against Hot heater plate for at least 10 seconds this will activate sensor
Temperature reading on heater plate controller is different to smartphone	Temperature reading is possibly incorrect or reading core temperature, not surface temperature	All PEWeldBank surface probes are accurate and calibrated when packed, if concerned have your heater plate independently tested.

Info@PEWeldBank.com

Calibration Details

In accordance with

<u>ASTM F3124-15. Standard Practice for</u>

<u>Data Recording the Procedure used to Produce Heat Butt Fusion Joints in Plastic Piping Systems or Fittings.</u>

GOPOLY Pty Ltd (the manufacturer of the PEWeldBank sensor set) recommends calibration on a bi-annual basis (every 2 years). However, local governance may have different requirements, so we suggest that you check with the relevant authorities in your area.

Pressure Transducers come with a 5-year performance guarantee from the instrument manufacturer, the Pressure Transducers can be tested / compared against qualified instruments.

Surface Temperature Probes come with a 2-year performance guarantee from the instrument manufacturer. The Surface Temperature Probes can be tested / compared against qualified instruments.

Independent Laboratory Testing / Calibration may be requested in some cases. If so, we recommend that you contact a local testing / calibration laboratory to calibrate Pressure Transducer and Surface Temperature Probe, or return to GOPOLY for this service.
